

# VERTIV™ HEROES OF POWER:

## William Stanley Jr.

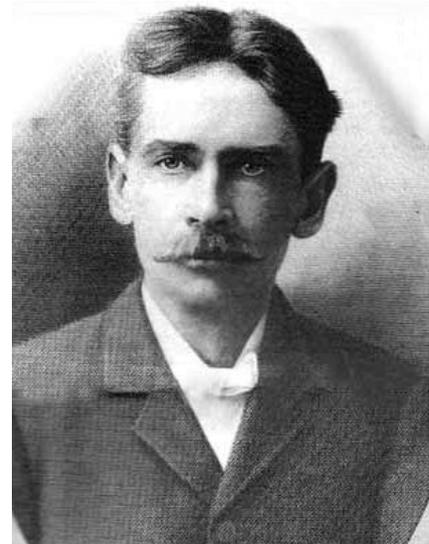

### THE TRANSFORMER

In 1885, this physicist and electrician developed the first practical transformer by improving on earlier European designs.

Then in 1886, while working with George Westinghouse, he demonstrated the first complete system of high voltage alternating current transmission, complete with generators, transformers and transmission lines.

With some 129 patents to his credit, there is no doubt this genius was instrumental in bringing electrical power to the masses.

**Inducing, isn't it?**

The **LIEBERT® EXM™ UPS** continues our long history of innovation in critical power protection.

- Scalable
- Efficient
- Intelligent
- Reliable
- Flexible
